

Experiment 1: Regular Expressions in Python

Program

```
import re

text = "My phone number is 9876543210 and email is student@gmail.com"

phone = re.search(r"\d{10}", text)

email = re.search(r"\S+@\S+", text)

print("Phone Number:", phone.group())

print("Email:", email.group())
```

Output

The screenshot shows a Google Colab notebook interface. The browser tabs include 'Welcome to Colab - Colab', 'DSA0305-NLP/CO1-Assessment', 'Python NLP Techniques', and 'Ask Gemini'. The URL bar shows 'colab.research.google.com/notebooks/intro.ipynb#scrollTo=MynRFSYJAAfp'. The notebook title is 'Welcome to Colab' with a warning 'Cannot save changes'. The menu bar includes 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', and 'Help'. The toolbar shows 'Commands', '+ Code', '+ Text', 'Run all', and 'Copy to Drive'. The left sidebar contains a 'Table of contents' with links to 'Welcome to Colab!', 'Google Colab is available in V...', 'Free-of-charge Pro plan f...', 'Access popular AI model...', 'Explore the Gemini API', 'Getting started', 'Data science', 'Machine learning', and 'More resources'. The main code cell is titled 'Image classification with KerasHub' and contains the following Python code:

```
[1] 0s
import re

text = "My phone number is 9876543210 and email is student@gmail.com"

phone = re.search(r"\d{10}", text)
email = re.search(r"\S+@\S+", text)

print("Phone Number:", phone.group())
print("Email:", email.group())
```

The output of the code cell is:

```
... Phone Number: 9876543210
Email: student@gmail.com
```

The bottom status bar shows 'Variables', 'Terminal', '13:33', and 'Python 3'. The system tray at the bottom shows the date '23-07-2026' and time '13:34'.
