

Experiment 6: Bigram (N-Gram) Text Generation

Program

```
import random

text = "I love python because python is easy to learn"

words = text.split()

bigrams = {}

for i in range(len(words)-1):

    first = words[i]

    second = words[i+1]

    if first not in bigrams:

        bigrams[first] = []

    bigrams[first].append(second)

word = "I"

sentence = word

for i in range(8):

    if word in bigrams:

        word = random.choice(bigrams[word])

    sentence += " " + word
```

else:

break

print(sentence)

Output

```
bigrams = {}

for i in range(len(words)-1):
    first = words[i]
    second = words[i+1]

    if first not in bigrams:
        bigrams[first] = []

    bigrams[first].append(second)

word = "I"
sentence = word

for i in range(8):
    if word in bigrams:
        word = random.choice(bigrams[word])
        sentence += " " + word
    else:
        break

print(sentence)
```
