

Experiment 8: Simple Stochastic POS Tagger

Program

```
import random
```

```
dictionary = {
```

```
    "dog": ["NN"],
```

```
    "runs": ["VB", "NN"],
```

```
    "fast": ["RB", "JJ"],
```

```
    "cat": ["NN"]
```

```
}
```

```
sentence = ["dog", "runs", "fast"]
```

```
for word in sentence:
```

```
    tag = random.choice(dictionary.get(word, ["NN"]))
```

```
    print(word, ":", tag)
```

Output

```
1] 0s ▶ import random

dictionary = {
    "dog": ["NN"],
    "runs": ["VB", "NN"],
    "fast": ["RB", "JJ"],
    "cat": ["NN"]
}

sentence = ["dog", "runs", "fast"]

for word in sentence:
    tag = random.choice(dictionary.get(word, ["NN"]))
    print(word, ":", tag)
```

```
... dog : NN
runs : NN
fast : RB
```
