

Experiment 14. Check Agreement in Sentences

Program

```
rules = {  
    "he": "runs",  
    "she": "runs",  
    "john": "runs",  
    "they": "run",  
    "we": "run",  
    "i": "run"  
}  
  
sentence = input("Enter sentence: ").lower().split()  
  
if len(sentence) == 2:  
    subject, verb = sentence  
  
    if subject in rules and rules[subject] == verb:  
        print("Sentence is grammatically correct.")  
    else:  
        print("Subject-Verb agreement error.")  
else:
```

```
print("Enter a two-word sentence.")
```

Output

The screenshot shows a Python IDE window titled "# Subject-Verb Agreement Checker". The code defines a dictionary of subject-verb pairs and checks if a user input sentence is grammatically correct. The output shows the user input "He runs" and the program's response "Sentence is grammatically correct."

```
[9] ✓ 13s # Subject-Verb Agreement Checker

rules = {
    "he": "runs",
    "she": "runs",
    "john": "runs",
    "they": "run",
    "we": "run",
    "i": "run"
}

sentence = input("Enter sentence: ").lower().split()

if len(sentence) == 2:
    subject, verb = sentence

    if subject in rules and rules[subject] == verb:
        print("Sentence is grammatically correct.")
    else:
        print("Subject-Verb agreement error.")
else:
    print("Enter a two-word sentence.")

... Enter sentence: He runs
Sentence is grammatically correct.
```

The IDE interface includes a Windows taskbar at the bottom with various application icons, a search bar, and system status indicators (time, date, language, network, and battery).
