

Experiment 10: Transformation-Based POS Tagging

Program

```
sentence = ["The", "cats", "are", "playing"]
```

```
tags = []
```

```
for word in sentence:
```

```
    if word.lower() == "the":
```

```
        tag = "DT"
```

```
    elif word.lower() in ["is", "are", "am"]:
```

```
        tag = "VB"
```

```
    elif word.endswith("ing"):
```

```
        tag = "VBG"
```

```
    elif word.endswith("s"):
```

```
        tag = "NNS"
```

```
    else:
```

```
        tag = "NN"
```

```
    tags.append((word, tag))
```

```
print("Tagged Sentence:")
```

```
print(tags)
```

Output

```
]
>
1  sentence = ["The", "cats", "are", "playing"]
2
3  tags = []
4
5  for word in sentence:
6      if word.lower() == "the":
7          tag = "DT"
8      elif word.lower() in ["is", "are", "am"]:
9          tag = "VB"
10     elif word.endswith("ing"):
11         tag = "VBG"
12     elif word.endswith("s"):
13         tag = "NNS"
14     else:
15         tag = "NN"
16
17     tags.append((word, tag))
18
19 print("Tagged Sentence:")
20 print(tags)
21
... Tagged Sentence:
[('The', 'DT'), ('cats', 'NNS'), ('are', 'VB'), ('playing', 'VBG')]
```
