

Experiment 9: Rule-Based POS Tagger using Regular Expressions

Program

```
import nltk

patterns = [

    (r'.*ing$', 'VBG'),

    (r'.*ed$', 'VBD'),

    (r'.*ly$', 'RB'),

    (r'.*es$', 'VBZ'),

    (r'.*', 'NN')

]

tagger = nltk.RegexpTagger(patterns)

sentence = "running played quickly dances"

words = sentence.split()

print(tagger.tag(words))
```

Output

```
[12]
✓ Os
import nltk

patterns = [
    (r'.*ing$', 'VBG'),
    (r'.*ed$', 'VBD'),
    (r'.*ly$', 'RB'),
    (r'.*es$', 'VBZ'),
    (r'.*', 'NN')
]

tagger = nltk.RegexpTagger(patterns)

sentence = "running played quickly dances"

words = sentence.split()

print(tagger.tag(words))
```

... [('running', 'VBG'), ('played', 'VBD'), ('quickly', 'RB'), ('dances', 'VBZ')]
